

MicroOne

Single use microfiber mops

Single use mops.

Hygiene and performance without compromise.

For years, Vileda Professional has set the standard in durable microfibre cleaning. This knowledge has now been transferred into the MicroOne range of single use microfibre flat mops.

The MicroOne range of microfibre mops are engineered to offer the advantages of single use applications whilst maintaining the look and performance of a durable mop.

Their flexibility and low cost make them ideal for use in a wide range of applications – from hygiene sensitive areas to general use in sites without access to laundry.

When hygiene is paramount

Nothing beats microfibers when it comes to hygienic cleaning!

All mops in the MicroOne range have a proven 99.99% bacteria reduction and are compliant with a wide range of cleaning solutions, including chlorine-based disinfectants. Within health care settings the single use concept reduces

the risk of cross contamination dramatically as one mop is used per patient room and simply disposed of after use.

In sites without laundry, MicroOne is durable enough for a single days cleaning before being disposed of. No more issues of storing damp mops in cleaning cupboards overnight.

Suitable for all floor cleaning systems

MicroOne is available for all flat mop systems – including 40cm Velcro, 40cm Pocket, 50cm Swep Duo and the innovative UltraSpeed flat mop bucket and press system.

All mops are available in four colours to suit HACCP requirements and allow easy identification within different application areas or departments.

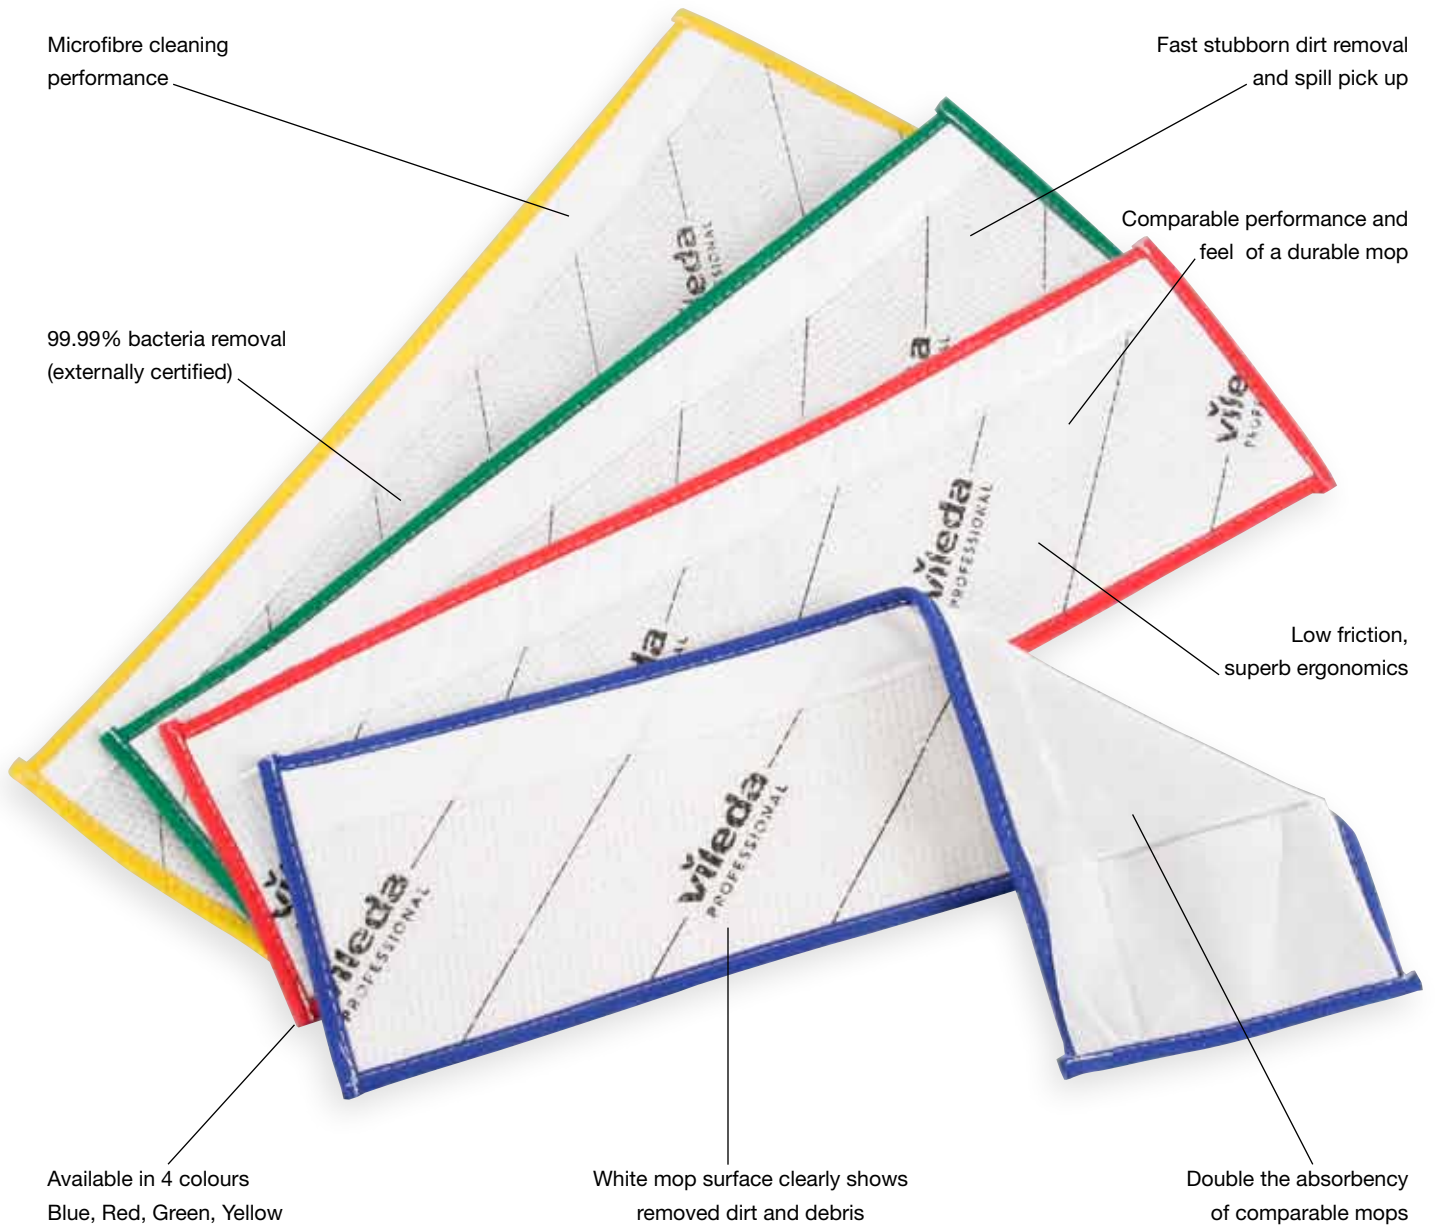

Pre-prepared

MicroOne Swep Duo is supplied in a handy plastic bag with re-sealable label that fits perfectly inside a pre-preparation box. The express and pocket versions are designed to work with all leading dosing systems in place of durable mops.

Bucket & Press

MicroOne can be used with the UltraSpeed Pro press for repeated use and disposal at the end of each shift or day. If using a vertical press system simply replace your durable mop with MicroOne pocket and follow your existing cleaning protocols.
